2. WPMZ-1 2ch Temperature signal input

- 1) Convert RTD signal to 4-20mA by RTD converter WSPF-RTS-F11A-DX.
- 2) Input 2ch, Display Ach & Bch value in 1 display.
- 3) WPMZ-1 can **Calculate difference of 2ch input (Ach - Bch)**.
If calculation result is below or over setpoints (4 setpoints setting available) when one of RTD broken etc., then Relay signal will output to detect.

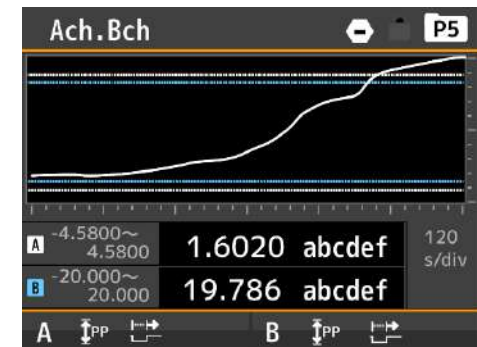

3. WPMZ-1 Membrane filter clogging monitoring

Detects clogging from the pressure difference before and after the filter

Standard : $(\text{PressureA} - \text{PressureB}) < 100$
Clogged : $(\text{PressureA} - \text{PressureB}) \geq 100$

It is also possible to detect abnormalities that occur suddenly and grasp the situation up to that point.

4. WPMZ-1 Thickness measurement by 2ch input

Example of Calculation method

$$(A+B)+C \times K = \text{Thickness value}$$

A = Sensor A value (Ach input)

B = Sensor B value (Bch input)

C = Total length (between A & B) – Rated width

K = -1

*C & K can set value by setting.

For example, if you want to display zero at 2cm width, and total length between A & B is 10cm, set 8 as C by setting. Then calculation result will be difference from 2cm rated width.
